

Endpoint Security

AN IDC CONTINUOUS INTELLIGENCE SERVICE

IDC's *Endpoint Security* service covers security software and hardware products related to endpoint security for personal computing devices, physical and virtualized servers, software-defined workloads, and mobile devices. Specific functions covered include endpoint protection, server protection, workload protection, detection and response, mobile threat management, threat hunting, and consumer digital life protection. The service is designed to provide in-depth coverage of the endpoint security market.

Markets and Subjects Analyzed

- Corporate endpoint security
- Modern endpoint security (endpoint protection platform, endpoint detection and response, and mobile threat management)
- Physical and virtualized server and software-defined workload security
- Consumer endpoint security
- Consumer digital protection products and services

Core Research

- Corporate Endpoint Security Software Market Forecast
